

ANSELEM OKEKE

Cloud Operations Engineer | Kubernetes | Linux | Automation | Observability

Berlin, Germany | +49 178 5077392 | [Email](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Cloud Operations and DevOps Engineer with hands-on experience operating, monitoring, troubleshooting, and automating Linux, Windows, cloud, and Kubernetes environments. Skilled in AWS, Azure DevOps, Docker, Kubernetes, Helm, Terraform, Ansible, Python, SQL, CI/CD, and observability. Experienced in investigating infrastructure, application, network, pipeline, and database issues using metrics, logs, health checks, and SQL queries. Strong background in operational documentation, incident troubleshooting, automation, and collaboration with development, testing, and support teams. Fluent in English and willing to participate in rotating on-call duty.

CORE SKILLS

Cloud: AWS, Azure DevOps, AKS, IAM, EC2, VPC, subnets, load balancing, cloud networking

Containers: Docker, Podman, Kubernetes, Helm, Kustomize, Argo CD, Ingress, deployments, probes

Operations: Linux, Windows Server, service management, patching, troubleshooting, RCA, runbooks

Observability: Prometheus, Grafana, Loki, OpenSearch, ELK, Datadog, Splunk, Nagios

Automation: Python, Bash, PowerShell, Terraform, Ansible, GitHub Actions

CI/CD: GitLab CI/CD, Azure DevOps, GitHub Actions, Git, Perforce, artifact management

Data: PostgreSQL, SQLite, SQL queries, operational data analysis, connection troubleshooting

Networking: DNS, TCP/IP, TLS, HTTPS, WebSocket, NGINX, Ingress, firewalls, VPN

Security: AWS IAM, HashiCorp Vault, OIDC, JWT, access controls, secrets management

ITSM: Incident investigation, change documentation, ServiceNow, SOPs, technical handover

PROFESSIONAL EXPERIENCE

Cloud Operations and Platform Engineering Project

Smart Monitor — Kubernetes Observability and Automated Recovery Platform

Germany | April 2025 – Present | [GitHub](#)

- Built a Python operations platform for Linux, Windows, and Kubernetes environments.
- Monitored infrastructure, services, processes, networks, pods, nodes, and cluster health.
- Used PostgreSQL and SQLite to store monitoring, alert, and recovery records.
- Wrote SQL queries to investigate alerts, failures, service states, and recovery activity.
- Created Prometheus metrics and Grafana dashboards for infrastructure and application health.
- Integrated Loki and OpenSearch for centralized logging and incident investigation.
- Automated guarded service and network recovery using Python and operating-system tools.
- Added retry limits, thresholds, cooldowns, and audit logs to control automated recovery.
- Packaged and deployed Kubernetes applications using Docker, Helm, and Kustomize.
- Implemented GitOps delivery and drift detection using Argo CD.
- Automated cloud and system provisioning using Terraform and Ansible.
- Configured Kubernetes readiness, liveness, and startup probes for service validation.
- Investigated DNS, network, application, database, and Kubernetes connectivity failures.
- Simulated operational incidents to validate alerts, dashboards, and recovery procedures.
- Integrated Vault and External Secrets Operator for secure Kubernetes secret delivery.
- Documented deployment, monitoring, incident-response, and recovery runbooks.

CI/CD and Test Automation Engineer — Embedded Linux and DVR Systems

STRABAG SE | Germany | December 2024 – April 2025

- Operated and troubleshoot Linux and Windows CI/CD runner environments.
- Investigated pipeline failures using logs, test reports, and dependency comparisons.
- Improved build consistency by standardizing runner dependencies and prerequisites.

- Supported migration from Perforce to GitLab for source and release management.
- Automated C++ and CMake build workflows for embedded Linux firmware.
- Packaged and published .bin, .tar.gz, and flash metadata artifacts.
- Integrated JUnit and XML reports to improve automated test visibility.
- Standardized pipeline logs to accelerate troubleshooting and root-cause analysis.
- Maintained repeatable embedded Linux and IP-based validation environments.
- Diagnosed application, operating-system, network, and build-environment failures.
- Collaborated with developers and testers to reproduce and resolve technical issues.
- Created Confluence runbooks for setup, troubleshooting, and operational handover.

IoT System Application Developer — Master's Thesis and Student Role

Vaillant Group | Germany | March 2021 – February 2024

- Developed a Python implementation of the EEBUS SHIP protocol for IoT communication.
- Built asynchronous services using Python, TCP/IP, TLS, and WebSocket.
- Investigated service, protocol, authentication, and network connectivity issues.
- Automated build and deployment workflows using Azure DevOps.
- Used Git-based workflows for code review, versioning, and release control.
- Validated containerized services within AKS-based Kubernetes environments.
- Used Grafana and Datadog to monitor services and investigate failures.
- Tested APIs, communication flows, certificates, and application integrations.
- Collaborated with development and technical teams on customer-focused requirements.
- Documented architecture, testing, troubleshooting, and deployment procedures.
- Developed a ServiceNow application using JavaScript.
- Presented technical results and operational recommendations to stakeholders.

ICT Technician — Systems and Cloud Operations Support

Aptech Computer Education | Nigeria | June 2016 – January 2018

- Supported Windows Server, workstations, applications, and network services.
- Automated server provisioning and administration tasks using PowerShell.
- Configured and troubleshot DNS, TCP/IP, firewall, and service connectivity.
- Investigated operational issues using Splunk and Windows Event Logs.
- Monitored system availability, resource usage, services, and user access.
- Installed, configured, patched, and maintained server and desktop systems.
- Resolved user, application, network, and infrastructure support incidents.
- Documented recurring issues, resolutions, and operational procedures.
- Supported access management, software deployment, and system configuration.
- Escalated complex incidents with clear logs and troubleshooting evidence.

IT Support and Infrastructure Operations

Digital Bridge Institute | Nigeria | June 2015 – January 2016

- Supported Linux and Windows systems across user and server environments.
- Administered users, groups, permissions, and infrastructure access controls.
- Automated repeatable server configuration tasks using Ansible.
- Troubleshot DNS, TCP/IP, routing, and application connectivity issues.
- Monitored system services, logs, storage, and resource utilization.
- Investigated infrastructure incidents and documented root causes.
- Supported firewall, network, server, and endpoint configuration changes.
- Created technical procedures for setup, support, and recovery activities.
- Collaborated with users and technical teams to resolve service interruptions.
- Maintained accurate records of incidents, changes, and completed work.

IT Support and Systems Operations

Nigeria Communications Commission | Nigeria | May 2010 – April 2011

- Supported Linux servers, Windows systems, and Active Directory environments.
- Automated Active Directory user lifecycle tasks and access administration.

- Maintained Linux services, patches, logs, storage, and health checks.
- Created Nagios checks for system, network, and service availability.
- Investigated server, application, authentication, and network incidents.
- Supported VPN, firewall, DNS, and TCP/IP troubleshooting.
- Monitored infrastructure alerts and escalated critical operational issues.
- Documented access, firewall, VPN, and system configuration changes.
- Assisted with backup checks, service recovery, and system maintenance.
- Supported users while meeting incident-resolution and service requirements.

EDUCATION

M.Sc. Computer Simulation in Science

- **University of Wuppertal, Germany** | October 2019 – February 2024
- Master's Thesis completed with Vaillant Group:
- **Development and Implementation of an EEBUS SHIP Stack Based on Python**

B.Sc. Physics

- **Nigeria** | October 2010 – August 2014

CERTIFICATIONS AND TRAINING

- AWS Certified Cloud Practitioner
- ITIL 4 Foundation
- AWS re/Start Graduate
- DevOps Engineering Training
- GitLab CI/CD Training
- Ansible Automation Training

SELECTED CLOUD OPERATIONS PROJECT EXPERIENCE

AWS Kubernetes and Observability Platform

- Provisioned AWS networking and Kubernetes infrastructure using Terraform.
- Configured VPCs, private subnets, IAM, EKS, and managed cloud integrations.
- Deployed applications using Kubernetes, Helm, and Argo CD.
- Implemented Prometheus, Grafana, OpenSearch, and Fluent Bit observability.
- Configured alerts for node, pod, deployment, storage, and ingress failures.
- Investigated Kubernetes incidents using metrics, logs, events, and health checks.
- Integrated AWS load balancing and persistent storage with Kubernetes.
- Created operational dashboards, SLI/SLO definitions, and incident runbooks.
- Implemented Vault and External Secrets Operator for GitOps secret delivery.
- Validated infrastructure deployment, recovery, and controlled decommissioning.

LANGUAGES

- **English:** Fluent
- **German:** A2, actively progressing toward B1

AVAILABILITY

- Available for remote work from Germany.
- Willing to participate in a rotating on-call duty schedule.
